About ACP International

ACP International was founded in 1986. From humble beginnings in a small, single-wide trailer house to a comprehensive manufacturing facility in Arlington, Texas, ACP has provided services to many small and large companies for decades. The company also developed Concrete Graphics(r), a specialty sign product that withstands foot traffic. And in 2009, ACP acquired SA-SO signs and safety, a traffic and safety company.

The company has consistently grown and improved processes. By listening carefully to customer's customization needs and specifications, ACP is able to offer personalized service efficiently. Many employees have worked for ACP for decades. In today's business world, where people change jobs often and companies facilitate layoffs, ACP is proud to stand against that trend. The company's business model, longevity in the printing industry, and solid relationship with vendors and customers has created an environment of success.

Custom Products

ACP products are manufactured in the U.S.A. This provides the capability to prepare materials in the way that best meets customer's needs - in-house - which results in money and time saved when ACP is selected as the preferred printing partner. ACP can add custom imprints or colors to just about every product manufactured. Some customization may require a set-up charge or a minimum order. The fees vary, but a custom quotation can be quickly generated.

The company's printing equipment is all housed in north Texas and is capable of printing UV-stabilized materials, moisture-resistant products, and solvent-resistant decals. ACP's inventory includes several substrates including, but not limited to: aluminum, vinyl, Lexan polycarbonate, plastic, whiteboard material, and more! There are also several plotters on-site that provide the ability to cut in various die and custom shapes.

Literature

Additional information including videos and specification (spec) sheets are located online at www.ACPInternational.com. ACP is also on LinkedIn and Twitter!
